

Milestone 5

User Acceptance Test Plans

Feature #1 - Creating and Deleting New Users

Step #	Procedure	Expected Output	Pass/Fail
1	Login to website with given credentials	You should see the home page with multiple options	
2	Click 'Manage Users'	You should see two columns with a list of superusers and normal users. There should be a button 'Create new user'	
3	Click 'Create new user'	You should now see an input form	
4	Fill in the following details: Name: 'Test Bot' Email: 'test-bot@sample.org' Username: 'test-bot-1' Password: 'password' Repeat Password: 'password' Do not check 'Superuser' Now, click 'Register User'	You should be redirected to manage users page with 'Test Bot' appearing in the normal users table	
5	Click the logout link at top	You should see the login page you saw at the beginning	
6	Login with these credentials: Username: 'test-bot-1' Password: 'password'	You should see the familiar home page, with one less link - no 'Manage Users'	
7	Click Logout link at top	You should see the login page you saw at the beginning	
8	Login to website with credentials given at the beginning	You should see the old home page with multiple options	
9	Click 'Manage Users'	You should see two columns with a list of superusers and normal users. There should be a	

		button 'Create new user'	
10	Click 'Delete User' next to 'Test Bot'	The page will automatically update and you will no longer see 'Test Bot' listed in the table	
11	Click Logout link at the top	You should see the login page you saw at the beginning	
12	Login with these credentials again: Username: 'test-bot-1' Password: 'password'	You should get an error message saying 'Incorrect username or password'	

Feature #2 - Uploading, Disable, Deleting Websites

Step #	Procedure	Expected Output	Pass/Fail
1	Login to website with given credentials	You should see the home page with multiple options	
2	Click on Manage Websites	A page that shows enabled and disabled websites as well as a button to create a new website	
3	Click on Create a new website	You should see a title of "Upload New Website"	
4	Type "testWebsite" into the site name		
5	Click on "Choose File" and upload the given index.html file	You should see "index.html" next to the "Choose File" button	
6	Click "Upload Website"	You should see "testWebsite" under the enabled websites.	
7	Go to "http://73.229.199.171/testWebsite"	The website should be showing.	
8	Go to "http://73.229.199.171/userSites.php"	This should show the test website under enabled sites	
9	Click "disable" on the website	The website should move to the available websites column	
10	Go to "http://73.229.199.171/testWebsite"	It should show "Not Found"	
11	Go Back to " http://73.229.199.171/userSites.php " and click delete on the test website	The website should disappear	

Feature #3 - Uploading Private and Public Files

Step #	Procedure	Expected Output	Pass/Fail
1	Login to website with given credentials	You should see the home page with multiple options	
2	Go to 'Cloud Storage'	You should see 'Cloud Storage' at the top along with a list of private and public files.	
3	Click 'Choose File' and upload the given file.		
4	Click the 'private button'	The private button should be selected	
5	Click 'Upload File'	The file should show up in the private column	
6	Click 'Choose File' and upload the other given file		
7	Click the 'public button'	The public button should be selected	
8	Click 'Upload File'	The file should show up in the private column	
9	Click logout	The initial login screen should show up	
10	Login to website with different given credentials	You should see the home page again	
11	Go to 'Cloud Storage'	You should be able to see the public file that was uploaded and NOT be able to see the private file that was uploaded	
12	Click 'Delete' on the public test file	The file should get deleted
